Dear supporters and friends of Olive ONE,

The Olive ONE campaign is coming to an end next week and we have reached \$440,000 today. Thanks again for your support and we are excited to build Olive ONE for you. We want to take this opportunity to quickly summarize the connectivity features of Olive ONE again:

1) Networking

- Built-in Wifi 802.11n
- Ethernet available via optional USB-to-Ethernet dongle (Olive is planning to provide its own adapter, but will also support a selected number of 3rd party adapters)

2) Audio Output

Analog:

- Speaker out (via Olive PAC, included)
- Via optional USB-DAC

Digital:

- Wi-Fi Miracast, Wi-Fi Direct
- Bluetooth
- Digital out (S/PDIF, Coax), (3.5mm connector. RCA might still be possible, but is not confirmed)
- USB (Micro USB connector. Standard USB connector might still be possible, but is not confirmed.)

3) Digital Audio Input

- Bluetooth
- Wi-Fi: Miracast, W-iFi Direct, DLNA/UPnP

Please also visit us at http://myoliveone.com/Ones/tech_specs for more details regarding supported audio formats, OS features, power consumption etc.

Regarding the USB-DAC and supported manufacturers/models we will provide an update on our own website at www.myoliveone.com once we have finalized the specifications and

conducted testing. We estimate that this will happen in May/June, and strive to provide a solution that is available at the same time the Olive ONE ships.

The Hard Disk Drive (HDD) on the Olive ONE will be user-serviceable, which means you can add/replace the HDD yourself. Olive will only actively support Olive-installed HDDs as we have no control over 3rd party hard drives and the firmware installed. However we will provide a list of recommended drives that have been tested to work with the Olive ONE. Currently Olive ONE is available with 1TB and 2TB hard drives. Before we ship the Olive ONE we are likely to offer 2 additional versions with SSD drives, and 1 additional version with 2.5TB capacity. The pricing for these versions has not yet been determined, but will be finalized before the ONE ships. We will offer everyone to upgrade their HDD (by contributing the \$-difference).

Once we are closer to the shipping date we will also provide a high-level software roadmap, which will give you a better idea of what features will be implemented in V1.0, and which will be released in later software updates.

After the campaign has ended we will continue to monitor the forum on the Indiegogo website. If you need a quick reply we always recommend to send us and email directly to info@olivehd.com.

Last but not least we have already indicated that we likely will increase the price by \$100 after the campaign ends. This also is a benefit to all our backers who supported the project and made it become reality.

Thanks for supporting Olive ONE!

Olive ONE team
